

# How to Run the Multimedia Modules

1. Copy and paste the following address into a Windows Explorer window:

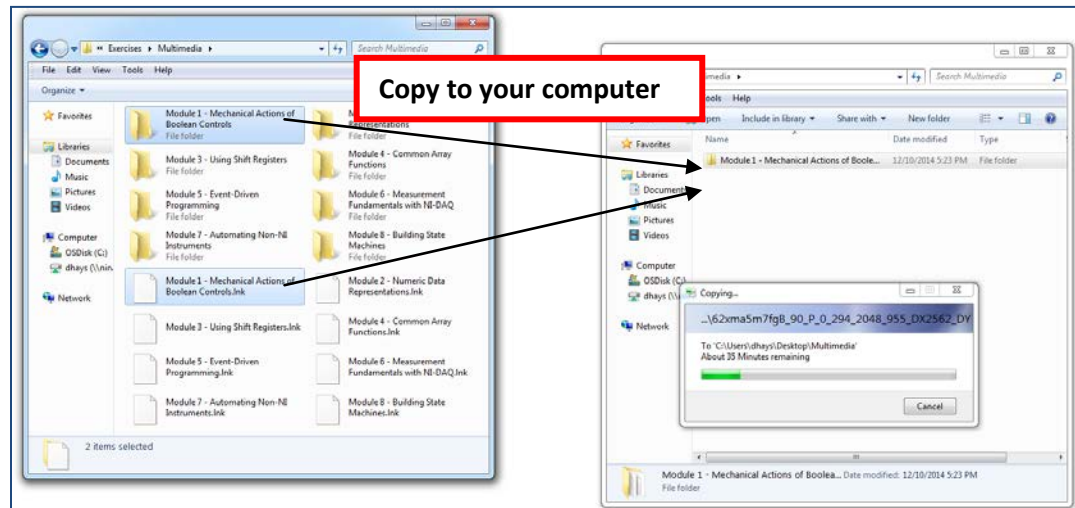

**<ftp://custed:1029updatecenitrc@ftp.ni.com/>**

2. Navigate to the 2014 English version of LabVIEW Core 1 or Core 2. Go to **Exercises » Multimedia**.

3. You will need to download these materials locally. For example if you want to run Module 1, you need to **download two things**:
- The folder: "Module 1 – Mechanical Actions of Boolean Controls"  
This contains the source material.
  - The .lnk file: "Module 1 - Mechanical Actions of Boolean Controls.lnk"

4. Now you can click the .lnk file and it will launch in your web browser. You may need to install Adobe Flash. Depending on your monitor resolution, you may also need to zoom out within the web browser (hold **ctrl** and press either – to zoom).
